

Will your IC and sensor perform in the most extreme temperature environments?

MD (Mechanical Devices) is a leading designer, developer and global supplier of state of the art thermal forcing systems and thermal solutions. Our systems are used by top semiconductor companies to test their IC devices and wafers.

Regardless whether using bench, ATE or SLT, MD units provides fast, accurate, reliable and cost effective solutions, using advanced and patented technology to serve your needs.

Our systems stimulate the DUT to the desired temperature by direct contact.

Some of the very unique advantages we offer over traditional Thermal solutions include:

- Stand alone, real plug and play (no chiller or air required).
- Highest cooling power and extensive temp range -75C to 200C
- Fast time to temp and precise temp.
- No maintenance required.
- Superb cost effectiveness.
